# ANNUAL DRINKING WATER QUALITY REPORT FOR RAFTER J IMP. & SER. DISTRICT ,PWS# 5600822C FOR 2021

#### Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies

### Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. EPA/Center For Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

### Where does my water come from?

WATER COMES FROM 4 WELLS

Source water assessment and its availability

#### THERE HAS BEEN A SOURCE WATER ASSESSMENT

#### Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amount of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential heath effects can be obtained by calling the EPA safe drinking water hotline 800-426-4791

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban runoff, and residential uses.

#### How can I get involved?

If there are questions, contact the operator for answers

#### Monitoring and reporting of compliance data violations: NONE

contaminant	required sample frequency	# of samples taken	when sample should have been	when sample was taken
	1		taken	

What happened? What was done?

#### Additional information for lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our system is responsible for providing high quality drinking water, but cannot control the materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds or more before drinking or using the water for cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information may be found at the Safe Drinking Water Hotline.

#### **Water Quality Data Table**

In order to ensure water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all the drinking water contaminates that we detected during the calendar year of this report. Although many more contaminates were tested , only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminates. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminates would be expensive, and in most cases , would not provide increased protection. A few may improve the taste of water, and have nutritional value at low levels. Unless noted , the data in this table was done in the calendar year of this report. The EPA mandates us to monitor for some contaminates less than once per year. As such, some of the data, though representative, may be more than one year old. In this table you may find terms and abbreviations at the end of the report .

contaminant	MCLG	MCL	your	sample	violation	typical source
			water	date		
Arsenic (PPB)		10	2	2019	NO	
floride (PPM)	4	4	0.2	2019	no	
nitrate (measured as nitrogen (PPM)	10	10	0.38	2021	no	
radioactive contaminants						
Radium pCi/l		5.0	2.6	2020	no	
Uranium mg/l		.03	.0008	2020	no	
gros alpha (pci/l)	0	15	ND	2020	no	

copper	1.3	1.3	0.055(90 <sup>th</sup> percentile)	2020	no	
lead (ppb)	0	15	.54(90th	2020	no	
			percentile)			

**Microbiological contaminants**

# **UNIT DESCRIPTIONS**

TERM	DEFINITION
PPM	parts per million
ppb	parts per billion
ppt	parts per trillion
na	not applicable
ND	not detected
NR	monitoring not required

Important drinking water definitions

term	definition
MCLG	maximum contaminant level goal
MCL	maximum contaminant level
TT	treatment technique
AL	action level
MRDLG	maximum residual disinfection level goal
MRDL	maximum residual disinfectant level
MNR	monitored not regulated
MPL	maximum permissible level
